

AARON WOOD

Full-stack developer building production software used by 200+ BYU faculty & staff

aarondnwd@gmail.com | (801) 870-6959 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

Brigham Young University, Provo, UT

Bachelor of Science in Computer Science | Expected Graduation: April 2027 | GPA: 3.65

Relevant Coursework: Data Structures & Algorithms, Web Programming, Software Engineering, Statistical Modeling for Data Science, Statistical Data Analysis, Information Systems, How to Program, Programming in Python

TECHNICAL SKILLS

Frontend: Angular, TypeScript, HTML, CSS, SCSS

Backend: TypeScript, Node.js, tRPC, Prisma

Languages: Python, C++, SQL

Tools: Git, GitHub, Vercel, PostgreSQL, AI-assisted development (Claude, Codex, Copilot)

EXPERIENCE

Web Developer – FHSS Technology Services, BYU | January 2026 – Current

- Building TypeScript, Angular, and Prisma enterprise web applications used by 200+ faculty & staff
- Collaborating in a team using Git, weekly trainings, and code reviews
- Reading, debugging, and making incremental updates to large existing codebases

Traveling Teller – Zions Bank | April 2023 – May 2025

- Handled large cash volumes daily with zero discrepancies
 - Adapted quickly across teams and systems while following strict procedures
 - Maintained speed and accuracy while serving customers
-

PROJECTS

Muse Inventory Management | [Live](#) | [GitHub](#)

Technologies: Next.js, TypeScript, tRPC, Prisma, PostgreSQL

- Built a production inventory system, replacing spreadsheet workflows for a corporate event company
- Implemented reservation logic with conflict prevention, partial allocation, and inventory lifecycle tracking
- Developed user and admin roles for reservations and approvals
- Used AI agents to accelerate development and iterate on real user needs

AI Insights From Wearable Health Data | [Demo](#) | [GitHub](#)

Technologies: Expo, React Native, TypeScript, FatsAPI, PostgreSQL

- Built a mobile app turning wearable data into actionable health insights
- Integrated and standardized Apple HealthKit data for analysis
- Generated LLM summaries from health metrics via backend pipeline
- Designed UI to be clean and user-friendly
